

Meta Tulsa Data Center

The Tulsa Data Center will be part of our global infrastructure that brings Meta technologies and programs to life, making the future of human connection possible.

\$1B+

Data center investment in
Tulsa, Oklahoma

~100

Operational jobs supported
once completed

1,000+

Skilled trade workers on site at
peak construction

Operating Responsibly

Responsible energy and water use

Meta will work with local partners and Public Service Company of Oklahoma to plan for our energy needs and to ensure we are paying the full costs for the energy used by our data center, so consumers are not negatively impacted. Meta has also worked with the Tulsa Metropolitan Utility Authority to pay the full cost of water and wastewater service for our data center. Our operational data center buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation.

Water stewardship

Our goal is to be water positive in 2030, where we will restore more water than we consume globally where Meta has owned operations.

Clean and renewable energy

We are committed to supporting the addition of new energy projects to the grid — this includes five projects in Oklahoma that are adding 1,273 megawatts of new clean and renewable energy. Meta matches all of its electricity use with 100% clean and renewable energy.

Our global fleet of data centers supports Meta technologies that empower more than 3.6 billion people around the world to share ideas, offer support and make a difference.

Partnering with Oklahoma

Meta is committed to being a good neighbor and community partner. We do this by working with city and local partners to fund new critical infrastructure, such as roads, energy, water, wastewater and conservation projects, in addition to providing grants annually to support schools and nonprofits.

In Tulsa, Meta is investing more than \$25 million in local infrastructure improvements, including road and water infrastructure. To support local families in need, we are providing an annual grant to the Public Service Company of Oklahoma's Light a Life program to help customers who are struggling to pay their energy bills. We are also partnering with the Tulsa Community Foundation to establish a fund that will assist Tulsa residents in paying their water bills and include grants for water service line repair and replacement.

Jobs to build and operate our data centers

We're committed to supporting local jobs in communities where we have data centers. Each data center building requires hundreds to thousands of skilled trade labor jobs to construct — steel workers, pipefitters, electricians, carpenters, fiber technicians and more. Once operational, each data center supports hundreds of jobs — electricians, HVAC specialists, server and network techs, and engineers — to run some of the world's most advanced data centers.

Workforce Development

Meta is investing in the workforce that's building America's digital infrastructure — starting with the communities where we live and work. That commitment includes America's Workforce Academy (AWA), a nationwide, unprecedented fast-track to a long-term career in a skilled trade. Powered by an initial \$115 million first-year investment, AWA is a cost-free program that supports all participants while they learn and then guarantees a job for all graduates. Graduates earn both the industry-recognized National Center for Construction Education and Research (NCCER) credential and an America's Workforce Certificate, both designed to travel with the worker across employers and industry sectors.

To strengthen the local talent pipeline, Meta is partnering with Tulsa Tech and Tulsa Community College on a new, cross-institutional workforce development program and learning lab for digital infrastructure careers. We anticipate this partnership will create a pipeline of 200+ graduates annually in technical trades, including cooling simulation, fiber optics and structured cabling, along with AI and data analytics programming.

Supporting local organizations

Meta supports the community through The Future is for Everyone Fund, providing direct funding for local nonprofits that support the community. Additionally, we'll bring our no-cost digital skills training workshops to Tulsa, helping small businesses and nonprofits grow their reach.

Meta is proud to support Eastside Rise with a grant to expand its neighborhood enhancement program across East Tulsa where our data center is located — supporting projects that range from community gardens and public art to homeowner repairs.

Water Stewardship

Our water stewardship program is focused on increasing data center water efficiency, supporting water restoration and conservation projects in watersheds where we have data centers, and being transparent with our water data. Initial projects include a partnership with Phytech that will provide irrigation technology to local farmers to help them minimize water withdrawal while optimizing yields, saving energy and reducing costs. This 10-year project will implement an innovative plant-sensor technology across approximately 1,500 acres of vital commodity crops, including corn, soybeans and winter wheat, to save over 50 million gallons of water per year.

The Tulsa Data Center will prioritize on-site water efficiency by:

- Using an efficient closed-loop, liquid cooled system that will use zero water for a majority of the year.
- Landscaping with native vegetation where possible to reduce irrigation demands.
- Capturing and infiltrating rainwater on site.
- Incorporating water-saving fixtures and technologies within data center facilities.
