

January 15, 2026

The Honorable Debbie-Anne A. Reese
Secretary
Federal Energy Regulatory Commission
888 First Street NE
Washington, DC 20426

RE: *Southwest Power Pool, Inc.*, Docket No. ER26-____
Submission of Notice of Cancellation of Interconnection Agreement

Dear Secretary Reese:

Pursuant to section 35.15 of the Federal Energy Regulatory Commission's ("Commission") regulations, 18 C.F.R. § 35.15, Southwest Power Pool, Inc. ("SPP") submits this filing to notify the Commission of the cancellation of an interchange and interconnection agreement between Public Service Company of Oklahoma ("PSO") and Grand River Dam Authority ("GRDA") with SPP as signatory ("First Revised Interconnection Agreement").¹ SPP respectfully requests that the Commission accept the cancellation of the First Revised Interconnection Agreement effective December 31, 2025.

I. Background and Notice of Cancellation

On December 20, 2016, in Docket No. ER17-588-000,² SPP filed the First Revised Interconnection Agreement with the Commission because SPP did not have a *pro forma* form for a transmission interconnection agreement in its Tariff.³ The

¹ The First Revised Interconnection Agreement is designated by SPP as First Revised Service Agreement No. 1135.

² See Submission of Interconnection Agreement of Southwest Power Pool, Inc., Docket No. ER17-588-000 (December 20, 2016).

³ See Southwest Power Pool, Inc., Open Access Transmission Tariff, Sixth Revised Volume No. 1 ("Tariff").

Commission accepted the First Revised Interconnection Agreement on February 14, 2017.⁴

Article X of the First Revised Interconnection Agreement states the First Revised Interconnection Agreement shall continue in effect until December 31, 2025. Unless then cancelled by two (2) years prior written notice by either PSO or GRDA, the First Revised Interconnection Agreement would remain in effect thereafter until so cancelled. GRDA sent a letter to PSO dated December 28, 2023, providing notice pursuant to Article X of the First Revised Interconnection Agreement of its desire to terminate the First Revised Interconnection Agreement as of December 31, 2025.

As the First Revised Interconnection Agreement was filed with the Commission, SPP submits this notice of cancellation to the Commission.

II. Effective Date and Waiver

SPP requests an effective date of December 31, 2025, for the cancellation of the First Revised Interconnection Agreement. To permit such an effective date, SPP also requests a waiver of the Commission's sixty day notice requirement.⁵ Good cause exists for such a waiver because December 31, 2025, was the date the First Revised Interconnection Agreement terminated in accordance with Article X.

III. Service

SPP is serving a copy of this filing on representatives for PSO and GRDA.

⁴ See *Sw. Power Pool, Inc.*, Letter Order, Docket No. ER17-588-000 (February 14, 2017).

⁵ See 18 C.F.R. § 35.15(a).

IV. Communications

Correspondence and communications with respect to this filing should be sent to, and SPP requests that the Secretary include on the official service list, the following:

Southwest Power Pool, Inc.
First Revised Service Agreement No. 1135

**INTERCHANGE AND
INTERCONNECTION AGREEMENT
AMONG
GRAND RIVER DAM AUTHORITY
AND
PUBLIC SERVICE COMPANY OF OKLAHOMA
AND
SOUTHWEST POWER POOL, INC.**

(Superseding, in its entirety,
the Amended Agreement
for Interchange of Electric Power and Energy,
dated May 22, 1985,
between
Grand River Dam Authority
and Public Service Company of Oklahoma
as amended,
February 28, 1991, April 28, 1998,
December 16, 1999, December 1, 2004,
and May 26, 2005)

INTERCHANGE AND INTERCONNECTION AGREEMENT
AMONG
GRAND RIVER DAM AUTHORITY
AND
PUBLIC SERVICE COMPANY OF OKLAHOMA
AND
SOUTHWEST POWER POOL, INC.

This INTERCHANGE AND INTERCONNECTION AGREEMENT (Including all Exhibits, this “Agreement”) is dated as of this 9th day of December, 2016, by and among Grand River Dam Authority (“Authority”), Public Service Company of Oklahoma (“Company”), hereinafter individually referred to as “Party” and collectively referred to as “Parties”, and Southwest Power Pool, Inc. (“SPP”).

WHEREAS, on May 22, 1985, the Authority and Company entered into an Amended Agreement for Interchange of Electric Power and Energy, as subsequently amended by the First, Second, Third, Fourth, and Fifth Amendments (the “1985 Agreement”); and

WHEREAS, Authority and Company are engaged in the business of generating, transmitting, and selling electric energy and in the development of resources of the State of Oklahoma; and

WHEREAS, the systems of the Parties are interconnected by transmission lines, herein called “Points of Interconnection,” are operating in synchronism, and are under the functional control of the SPP; and

WHEREAS, each of the Parties desires to deliver power to locations on its system to meet requirements of the other Party, hereinafter called “Load Center Delivery Points;”

WHEREAS, the Parties now agree to further amend this Agreement to reflect mutually agreeable changes to certain existing and planned Load Center Delivery Points and points of interconnection;

WHEREAS, Authority and Company acknowledge that in order to comply with Order No. 614 of the Federal Energy Regulatory Commission ("FERC"), any such amendment requires the restatement and integration of the 1985 Agreement and all earlier amendments;

NOW, THEREFORE, in consideration of the premises and of the mutual covenants herein contained, the Parties hereto agree with each other that the Amended Agreement for Interchange of Electric Power and Energy of May 22, 1985, as amended February 28, 1991, April 28, 1998, December 16, 1999, December 1, 2004, and May 26, 2005 between the parties, is hereby superseded by this Interchange and Interconnection Agreement and the parties hereto mutually contract and agree as follows:

ARTICLE I

PURCHASE, SALE AND INTERCHANGE

- 1.1 Each of the Parties agrees to interchange, purchase, sell, deliver, take, and pay for electric power and energy, at the rates and upon and subject to terms, provisions, and conditions hereinafter set forth, including such service schedules as may be initially a part of this Agreement and attached hereto or as may be added hereto from time to time.

ARTICLE II

COORDINATION

- 2.1 It is recognized by the parties hereto that the addition of electric generating capacity and transmission facilities will have its greatest value when the installation of such additional generating capacity, transmission facilities, and

capacity purchases or sales of one Party are coordinated with the installation of additional facilities and capacity purchases or sales of the other Party, so that each Party individually maintains sufficient capability to provide for its system load requirements plus reserves. A Coordinating Committee, consisting of one representative from each Party, shall confer as needed in order to accomplish such coordination. Each Party shall notify the other in writing the name of its representative and may change its representative at its sole discretion.

- 2.2 The Parties agree to coordinate, insofar as possible, the installation of generating capacity and to cooperate with each other in the purchase and sale of short-term capacity, in order to take advantage of the economics of joint planning and staggered installation of units.
- 2.3 The respective representatives of the Parties shall record in the operating logs the sending or receipt of any communication of unusual operating conditions which affect operating schedules, monthly billings, or other information pertinent to this Agreement, and shall, upon request, send confirmation thereof by mail.
- 2.4 The Coordinating Committee may establish operating guides to assist in the day-to-day administration of this Agreement; provided, however, that such operating guides shall not be construed to amend this Agreement. The designated representatives of the Parties shall approve each such guide and either Party may terminate the effectiveness of a previously approved guide upon ninety (90) days written notice.

ARTICLE III

DEFINITION OF TERMS

- 3.1 “Holiday” shall mean any Sunday, January 1, July 4, Memorial Day, Labor Day, Thanksgiving Day, and Christmas Day, or the days observed for such holidays, and other holidays observed generally by the industry throughout the State of Oklahoma.

- 3.2 “Force Majeure” as used herein shall mean any cause beyond the control of the Party affected which such Party could not reasonably have been expected to avoid by exercise of due diligence and foresight, including, but not limited to; storm, flood, drought, lightning, earthquake, fire, explosion, failure of facilities not due to lack of proper care and maintenance, civil disturbance, sabotage, labor dispute, war, national emergency, and restraint by court or other public authority. Nothing contained herein shall be construed so as to require a Party to settle any strike or labor dispute in which it may be involved.

ARTICLE IV

SERVICE TO BE RENDERED

- 4.1 The various specific services to be rendered by each Party to the other in furtherance of the purposes of the Parties in establishing and maintaining interconnection operation will vary from time to time during the term hereof, and the terms, conditions and rates applicable to such services must necessarily depend upon the conditions from time to time existing. Such specific services and the terms, conditions and rates applicable thereto will be set forth in Service Schedules duly executed from time to time between the parties hereto. When approved by all regulatory bodies having jurisdiction, such Service Schedules shall become part of this Agreement during the periods fixed by their respective terms.
- 4.2 Upon mutual agreement, either Party may purchase capacity and energy from the other Party. Such purchase and sale shall be evidenced by a separate agreement executed by the parties setting out the details of such transaction including the amount of such capacity and energy and the rates therefore. The letter agreement shall be subject to filing with or approved by all regulatory bodies having jurisdiction.

- 4.3 In addition to the specific transactions and services contemplated in this Article IV, Service Schedules attached hereto may be utilized from time to time as defined therein, in furtherance of energy conservation, economic operation, and service reliability.

ARTICLE V

COOPERATION

- 5.1 In furtherance of cooperation which is the essence and inducing cause of this Agreement, each party is making available to the other, to the extent herein provided, the use of its electric generating and transmission facilities, its communication and dispatching services, and its standby electric generating equipment and facilities, to assist the other in maintenance of continuous uninterruptible service at lowest cost. For the mutual protection of the parties, it is therefore agreed, (a) that neither Party shall make use of such electric facilities and service of the other Party herein committed, or the benefits thereof, to injure the business and service of the other Party, and (b) that in the event either Party (styled "A") contracts to supply or supplies electric power and energy, directly or indirectly through others, to serve any electric load or part thereof which now or within one (1) year prior to such contract or the beginning of such supply is or has been served by the other party (styled "B"), "B" will permit the use of "A" of the electric transmission and distribution facilities theretofore used by "B" in serving such load and will continue to operate and maintain the same for the benefit of "A", in serving such load, and will furnish standby for such service for the remaining period of this Agreement. Provided that either party may serve, either directly or indirectly through rural electric cooperatives and free from the conditions contained in this Section 5.1, the requirements of rural customers residing outside the boundaries of a community in which 1,500 or more people reside, and customers, requiring transformer capacity of less than 15 KVA each, and other customers mutually agreed upon. As consideration for such use of such facilities and for such standby, during such period, "A" shall purchase from and

pay “B” for, and “B” shall sell and deliver to “A” (in addition to other electric power and energy the purchase and sale of which is provided for herein), all electric power and energy supplied by “A” to serve such load, including line losses, at the standard rates of “B”, in force from time to time, applicable to the supply of such power and energy had “B” continued to serve such load.

ARTICLE VI

POINTS OF INTERCONNECTION

- 6.1 The parties agree to deliver and receive power and energy through the points of interconnection listed in Exhibit A attached hereto and made a part hereof.
- 6.2 Additional interconnections may be established between the systems of the Parties when mutually agreed upon in writing and Exhibit A to this Agreement shall be supplemented to include any new interconnection upon the completion of the construction of such interconnection.
- 6.3 In consideration of investments made, each Party shall have the right to the use of capacity in the interconnections in accordance with the provisions of this Agreement.
- 6.4 It is recognized that the Company arranged for certain points of interconnection between Authority’s electrical system and the electrical systems of third parties which resulted in Company being granted contract rights by Authority allowing Company to use certain interconnections as if they were interconnections between Company’s electrical system and the third party’s electrical system. It is further recognized that the Company executed interconnection agreements with such third parties based upon such contract rights. Such points of interconnection and the operating terms and conditions applying to them are described in Exhibit D entitled Contractual Points of Interconnection, attached hereto and made a part hereof. Such contractual points of interconnection may not be altered nor may the terms be changed without the mutual consent of all parties.

ARTICLE VII

LOAD CENTER DELIVERY POINTS

- 7.1 The parties agree to deliver power and energy to load center delivery points listed in Exhibit B attached hereto and made a part hereof in accordance with the provisions applying to each load center delivery point as shown in Exhibit B.
- 7.2 Additional load center delivery points may be established by the Parties when mutually agreed upon in writing and Exhibit B to this Agreement shall be supplemented to include any new load center delivery points upon the completion of construction of such load center delivery points.

ARTICLE VIII

OPERATING TERMS AND CONDITIONS

- 8.1 Each Party agrees that it will maintain and operate its electrical facilities in accordance with standards at least equal to those set forth in the National Electrical Safety Code as approved by the American National Standards Institute.
- 8.2 Each Party shall provide, maintain, and operate appropriate relays for each of its electric power circuit breakers of such type that same may be properly coordinated with relays and electric power circuit breakers provided by the other Party.
- 8.3 Each Party, at its own cost and expense, shall provide, install, maintain, and operate for its own electric lines and electric substations such electric power circuit breakers, sectionalizing switches, and protective apparatus as may be necessary to assure reasonable protection to the electric service on the other Party's system.

- 8.4 Company shall provide, maintain, and operate communication facilities, carrier current or equivalent, from its load dispatching center to interconnect with Authority's electric system, and Authority shall provide, maintain, and operate communication facilities, carrier current or equivalent, from its dispatching center to interconnect with Company's electric system, which shall be the means of communication between the dispatching offices of Authority and Company.
- 8.5 Each Party agrees that it will operate its electric facilities so as to maintain the delivery voltages with reasonable steadiness and will cooperate with each other in lowering voltage during light load periods and in increasing voltage during peak load periods to the extent permissible under good operating practices.
- 8.6 The Parties hereto recognize that difficult operating and technical problems may arise in the control of the frequency and in the control of the flow of power and of reactive kilovolt amperes over the transmission systems of both Parties and over other interconnections of both of them and that successful interconnected operation can only be accomplished through the cooperation of their respective operating departments. Such operating departments shall cooperate with each other in attempting to control the frequency and the flow of power and reactive kilovolt amperes from one system to other interconnected systems so that, as nearly as practicable, the delivery and receipt of power and energy shall be accomplished as provided for in this Agreement consistent with the least interference with any interchange or interconnection agreements which either party may have with other parties. Except as otherwise from time to time arranged between the Parties, neither Party shall be obligated, in connection with any operations hereunder to carry abnormal reactive current for the other Party when to do so, in the sole judgment of the Party adversely affected, would interfere with service to its system, would limit the use of the interconnecting facilities, or would require operation of generating equipment not normally operated. Should the power factor fall below either (a) the higher of 0.98 lagging or the power factor maintained by the delivering Party for the equivalent delivery level and general location or (b) 0.95 lagging at any individual delivery point

during the delivering Party's system peak conditions, and the delivering Party notifies the receiving Party of such condition, the receiving Party shall immediately with due diligence take all actions to correct the condition. If, after reasonable notice, the receiving Party does not provide the necessary reactive compensation and control equipment to comply with the objectives described in this Section 8.6, the delivering Party shall have the unilateral right (a) to install reactive compensation and control equipment sufficient to comply with the objectives described in this Section 8.6, at the receiving Party's expense, or (b) to open the interconnection until such time that the receiving Party takes action that complies with the objectives described in this Section 8.6.

- 8.7 Electric meters and instruments for measuring, recording and telemetering the electric power and energy movements under this Agreement, and to provide the data necessary for proper dispatching, controlling, and billing shall be installed as mutually agreed. Interconnection metering facilities shall provide for the measurement of (a) gross kilowatt flow (analog), (b) gross kilowatt-hours delivered by each Party, and (c) kilowatt-hours per hour demand (digital), and shall provide for the transducing of quantities (a) and (c) into electrical quantities which can be readily transmitted by practicable and acceptable communication channels to the Dispatching Office of Company and to the Dispatching Office of the Authority.
- 8.8 In the event a metering point or points are revised, and for all metering points added, there shall be provided suitable equipment to continuously meter reactive kilovolt amperes (RKVA).
- 8.9 Load Center Delivery Points metering shall be installed by the delivering Party and shall provide for the measurement of (a) gross kilowatt-hours delivered, (b) kilowatt-hours per hour demand and (c) reactive kilovolt ampere-hours (RKVAH) per hour demand.
- 8.10 Metering points shall be listed in Exhibit C to this Agreement.

- 8.11 The electric meters for measuring the flow of electric power and energy shall be arranged so that they can be read by representatives of respective Parties at all times.
- 8.12 Either of the Parties hereto shall have the right at their own expense to install suitable metering equipment at any interconnection provided for herein for the purpose of checking the meters installed by the other Party.
- 8.13 (a) Meter equipment shall be inspected and tested at least once each year by the Party responsible therefore and at any reasonable time upon request therefore by either Party. Metering equipment found to be defective or inaccurate should be repaired and readjusted or replaced. A meter shall be considered inaccurate if it is found to deviate from a standard meter in excess of $\frac{1}{2}$ of 1% when tested at 100% of load or 1% when tested at 10% of load. If any inspection or test discloses an error exceeding two percent (2%), correction based upon the inaccuracy found shall be made on the record of electric service furnished since the beginning of the monthly billing period immediately preceding the billing period during which the test was made and such correction when made shall constitute full adjustment, between Company and Authority, arising out of such inaccuracy of metering equipment.
- 8.13 (b) Should any metering equipment at any time fail to register, or should the registration thereof be so erratic as to be meaningless, the power and energy delivered shall be determined from check meters, if installed, and otherwise shall be determined from the best available data.
- 8.14 Accredited representatives of either Party shall be given access at all reasonable times to the electric metering equipment of the other. Upon request of either Party, its accredited representatives shall be permitted to examine the original records of the dispatcher and substation logs of the other Party which affect the billing to be made under this Agreement and to be present at the reading of electric meters at the close of a billing month. Either Party, at its own expense,

may copy or have photo printed any portion of such logs, meter charges, and records it may elect.

8.15 Each Party hereto shall exercise due diligence, reasonable care, and foresight to maintain continuity of electric service in the delivery and receipt of electric power and energy as provided for in this Agreement, but shall not be considered to have failed in said obligation if continuity of electric service is broken by reason of “force majeure”, as hereinbefore defined, or by reason of outages for repairing, replacing, or inspecting of electric facilities, provided due diligence be used to limit such outages, and provided such outages (except in case of emergency) be conducted upon a reasonably prearranged schedule coordinated with the maintenance schedule of the other Party as hereinbefore provided. Each Party shall exercise due diligence to remove the cause of any interruption with all reasonable dispatch. Such interruptions of electric service shall not constitute a breach of this Agreement on the part of either Party, and neither Party shall be liable to the other for damages resulting therefrom. In case of impaired or delayed restoration of electric service, or switching that materially changes the real or reactive electric power flows at any interconnection, notice thereof by the Party so affected shall be given immediately, by telephone, to the load dispatcher of the other Party and confirmed by letter, if requested, on the same date such notice is given by telephone. If either Party desires to do any switching that will materially change the flow of real or reactive electric power at any interconnection, the Party desiring to do such switching shall notify the other Party by telephone before such switching is done, except in the case of an emergency. If such switching will cause an overload or impair electric service on the other Party’s system, some mutually satisfactory procedure shall be determined between the Parties before any switching is done. If such switching is done on an emergency basis, the Party doing the switching shall notify the other Party as soon as possible.

8.16 The Parties agree, effective with this Agreement, to each be in full and independent control of its electric system and to operate its electric generating

equipment in such a manner as to regulate the electric output of its system as an electric load control area. Each agrees to make the required reliability council reporting for the operation of their respective systems.

- 8.17 Each Party will give all necessary permission to the other to enable the representatives of the other Party to carry out this Agreement, and each will give the other the right, by duly authorized agents, employees, and representatives, when accompanied by duly authorized representatives of the other, to enter its premises at all reasonable times, for the purpose of reading or checking meters, for inspecting, testing, repairing, renewing or exchanging any or all of its equipment which may be located on the property of the other, or performing any other work incident to rendering the services hereby contracted for.
- 8.18 Any and all equipment, apparatus, and devices necessary to fulfill each Party's obligations hereunder, placed or erected by one of the Parties hereto, on or in the property of the other, shall be and remain the property of the Party erecting or maintaining the same, regardless of the mode or manner of its annexation or attachment to the property of the other; and, upon the termination of this Agreement, each Party is hereby given the right to enter upon the property of the other for the purpose of removing, and to remove therefrom, its own property.
- 8.19 It is recognized that each of the Parties is party to agreements with other parties, which provide of interconnections, pooling, and interchange of electrical services. This Agreement shall not affect the obligations or rights of either of the Parties with respect to such agreements.
- 8.20 It is recognized that the flow of electric power throughout their interconnected systems is not entirely within the control of the Parties hereto, but is partly controlled by the electrical characteristics of their respective systems. Consequently, it is recognized by the Parties hereto that delivery of electric power and energy between the respective systems of the Parties requires the cooperation of both Parties to ensure that scheduled deliveries are made.

ARTICLE IX

BILLING AND PAYMENTS

- 9.1 Payment for all electric power and energy sold hereunder by Authority to Company shall be made at the office of the Authority on or before the twentieth day of each month or within ten (10) days after the billing date, whichever is later. Payment for all electric power and energy sold hereunder by the Company to Authority shall be made at the office of Company on or before the twentieth day of each month or within ten (10) days after the billing date, whichever is later. If such due date falls on a Holiday, the payment shall be due on the next day following such Holiday. If the payment by either Party to the other is not made with immediately available funds and within the allowable time, an additional 1.5% for each thirty (30) days or any portion thereof shall be added to the amount of the late payment.
- 9.2 Bills for electric power and energy supplied hereunder shall be based on the registrations of electric meters and dispatching records of the Parties and on the terms and conditions of this Agreement and the Service Schedules attached hereto, and shall be rendered monthly in accordance with the rates provided therein. Unless otherwise agreed upon between the Parties, a billing month, for the purposes hereof, shall be a calendar month. Bills shall be accompanied by a statement itemizing all factors, which may be necessary to a proper determination and computation of such bills.
- 9.3 The amount of various classifications of electric energy sold and purchased hereunder shall be determined from electric metering equipment installed at appropriate locations, as herein described, and from the log sheets of the operations of the Parties; and records shall be kept hourly of all the transactions hereunder.

- 9.4 Accounting for deliveries and receipt of all electric power and energy shall be made in accordance with the most practicable method to be agreed upon between the Parties hereto.
- 9.5 If either Party should fail to pay any bill, or any part of a bill, accruing under this Agreement on or before fifteen (15) days after due date thereof, the Party whose bill was not so paid by the other, in addition to other remedies afforded to it may discontinue interchange hereunder, upon giving twenty-four (24) hours prior written notice of its intention so to do; or such Party may file suit for payment of said bill plus legal interest and attorney's fees, and each Party agrees that such interest and reasonable attorney's fees are legitimate additional charges to any delinquent bill. The payment by either Party of that portion of any bill which it may be contesting shall not be construed as a waiver of its right to recover such portion so contested if such Party is successful in such contest.
- 9.6 Each Party agrees to make available to the other such electric system data as may be necessary to determine any factors for billing under terms and conditions of this Agreement.

ARTICLE X

TERM

- 10.1 This Agreement shall continue in effect until December 31, 2025. Unless then canceled by two (2) years prior written notice by either Party, it will remain in effect thereafter until so cancelled. Nothing herein contained shall be construed as limiting the rights of modification at anytime as specified in the Agreement. Upon the termination hereof, each of the Parties hereto shall discontinue the use of the facilities of the other and the Parties shall disconnect the existing interconnections.

ARTICLE XI

LIABILITY

- 11.1 Nothing in this Agreement shall impose upon any Party hereto any obligation whatsoever with respect to the performance by the other Party of such other Party's obligations to its customers nor shall impose any obligation whatsoever to or for the benefit of any person not a party to this Agreement.
- 11.2 Each party hereto will save and keep the other harmless from any and all losses, costs, damages, or expenses, including reasonable attorney's fees, for or by reason of any claim for injury to its own employees at any location and to other persons or property occasioned by the electric power and energy or equipment on its own lines or equipment, however caused.
- 11.3 In the event either Party hereto is unable to perform any or all of its obligations hereunder due to a condition of Force Majeure, such Party shall inform the other in writing of such condition and thereby shall not be held in breach of this Agreement for the duration of such condition of Force Majeure. The above notwithstanding, the party so suffering Forced Majeure shall, with all due diligence take action to remove such condition at the earliest possible time.
- 11.4 Nothing in this Agreement shall be construed to create or give rise to any liability on the part of SPP and the Parties expressly waive any claims that may arise against SPP under this Agreement. By executing this Agreement, SPP does not agree to the provisions that do not affect or involve SPP transmission service or SPP's role as a FERC approved Regional Transmission Organization ("RTO"). SPP's only purpose and involvement in executing this Agreement is with regard to any sections which may affect or involve SPP transmission service or SPP's role as a Commission-approved RTO.

ARTICLE XII

OPTIONS

- 12.1 Any options afforded to either Party under this Agreement are continuing, to the end that failure on the part of either Party at any time to exercise any option afforded to it shall in no way extinguish its right to exercise such option upon a like subsequent condition.

ARTICLE XIII

NOTICES

- 13.1 Any written notice, demand, bill, or payment (except as to requests, tenders, and load dispatching of all classes of electric power and energy by telephone and confirmation thereof by mail, as provided for under Operating Terms and Conditions (Article VIII) required or authorized by this Agreement shall be deemed properly given if properly mailed to Grand River Dam Authority, P.O. Box 409, Vinita, Oklahoma, 74301, or properly mailed to Public Service Company of Oklahoma, P.O. Box 201, Tulsa, Oklahoma, 74102, or properly mailed to Tessie Kentner at Southwest Power Pool, Inc., 201 Worthen Drive, Little Rock, Arkansas, 72223-4936 as appropriate. The designation of the address of either Party or SPP may be changed by the respective Party or SPP at any time, and from time to time, by similar notice.

ARTICLE XIV

REGULATORY BODIES

- 14.1 This Agreement is subject to the approval of any regulatory body whose approval is required. Nothing contained herein shall be construed as to require the Authority to submit or file this Agreement, Amendments, Service Schedule, rates, or any other addition to this Agreement with the Federal Energy Regulatory Commission.

ARTICLE XV

SUCCESSORS AND ASSIGNS AND PARTIES AT INEREST

- 15.1 This Agreement shall inure to the benefit of and be binding upon the successors and assigns of the respective Parties hereto.
- 15.2 Except as otherwise provided in this Agreement, this Agreement is not intended to and shall not create rights of any character whatsoever in favor of any person, corporation, association, or entity other than the Parties to this Agreement, and the obligations herein assumed are solely for the use and benefits of the Parties to this Agreement, their successors in interest, or assigns.

ARTICLE XVI

EFFECT OF SPP SIGNATURE

- 16.1 The Parties acknowledge and understand that the signature of the authorized officer of SPP on this Agreement is for the limited purpose of acknowledging that an officer of SPP has read the terms of this Agreement. The Parties and SPP further state that they understand that the FERC desires that the Parties keep SPP fully apprised of the matters addressed herein as well as any reliability and planning issues that may arise under this Agreement, and that the signature of the SPP officer shall not in any way be deemed to imply that SPP is taking responsibility for the actions of any Party, that SPP has any affirmative duties under this Agreement, or that SPP is liable in any way under this Agreement except as specifically provided in the SPP Open Access Transmission Tariff.

This Agreement shall become effective on December 1, 2016, after approval or acceptance for filing by all regulatory bodies having jurisdiction.

IN WITNESS WHEREOF, the hands and seals of the parties hereto, to three (3) copies, each to be considered an original, executed by their respective officers lawfully authorized so to do, this 9th day of December, 2016.

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 1

Dated: October 1, 1990

1. A point of interconnection at 69 kV shall be on the Dawson Substation side of the KAMO Owasso Substation in Range 14E, Township 20N, Section 4 at the point where the transmission line ownership changes in the 69 kV transmission line between Authority's Collinsville Substation and Company's Dawson Substation.
- 1.1 This point of interconnection will be operated as a closed interconnection until such time as Company determines its system expansion plans require the transmission line to be modified in such manner that it can no longer be operated as a closed interconnection. In such event, Company may open and permanently discontinue this point of interconnection after one year written notice to Authority.

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 2

Dated: May 1, 1985

2. A point of interconnection at 138 kV shall be at the Company's Catoosa Substation.
- 2.1 Authority agrees to operate and maintain the two (2) 161 kV electric transmission lines from the Markham Ferry Hydroelectric Generation Station to Authority's MAID Substation and thence to Company's Catoosa 138 kV Electric Substation. Such electric transmission lines shall terminate in the Authority's substation adjacent to the Company's Catoosa Substation and the Authority shall maintain and operate two (2) lines of the same capacity as the main transmission lines to connect the substation of the Authority and the substation of the Company. Company agrees to maintain and operate in its Catoosa Substation the necessary terminal facilities.

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 3

Dated: January 1, 2000

3. A point of interconnection at 115 kV shall be at Authority's Kerr Dam Substation.
- 3.1 Company agrees to operate and maintain a 115 kV transmission line from Company's Pryor Junction Substation to Authority's Kerr Dam Substation and shall terminate in a bay of such electric substation. Authority agrees to maintain and operate the necessary terminal facilities at Authority's Kerr Dam Substation.

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 4

Dated: May 1, 1985

4. A point of interconnection at 138 kV shall be at the Company's Northeastern Station Substation.
- 4.1 The Company agrees it will maintain and operate at the Company's Northeastern Station Substation all equipment necessary to terminate the Authority's 138 kV line.
- 4.2 The Company agrees to provide space for Authority to install one RTU cabinet in the Company's Northeastern Station Substation.

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 5

Deleted: December 1, 2016

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 6

Dated: January 1, 2000

6. A point of interconnection at 69 kV shall be at Company's Vinita Substation.
- 6.1 Authority agrees that it will maintain and operate its Vinita to Afton 69 kV electric transmission line sufficient to deliver the portion of its electric energy to Company that will, from time to time, be delivered through Company's Vinita Substation. Company agrees that it will maintain and operate its Vinita Substation with equipment necessary to deliver and to accept delivery of electric power and energy hereunder. In the event of an emergency the Company may maintain the Afton Substation to Vinita Substation 69 kV line and the Afton Substation to the Sailboat Bridge Substation 69 kV line, including the Fairland Tap, after giving notice to the Authority, in order to maintain service to Company's customers.
- 6.2 The Authority will operate and maintain its Afton Substation, consisting of terminations for the 161 kV line; 161/69 kV autotransformer; and terminations with power circuit breakers for the Vinita and Sailboat Bridge lines with sufficient capacity to deliver the energy that Company will, from time to time, receive through such interconnection, not to exceed 50,000 KVA. The Authority will operate and maintain a 69 kV line from the Afton Substation to the line termination position at Company's Vinita Substation. Company will operate and maintain the 69 kV tap near Afton to Company's Afton Explorer Pump Station. Company may connect an additional substation in the vicinity of Afton to serve its loads in that area.

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 6 - continued

Dated: January 1, 2000

- 6.3 Authority agrees to operate and maintain the 69 kV line from the Afton Substation to Company's Sailboat Bridge Substation and to the 69 kV interconnection with The Empire District Electric Company (EDE) at the Fairland Substation of EDE. Company may connect a line extension to Authority's Sailboat Bridge line so as to serve Company's loads in the vicinity of Grove and to provide transmission system interconnections in that vicinity as may be required. Authority may, upon two (2) years written notice to Company, upgrade the 69 kV Afton Substation to Sailboat Bridge Substation transmission line to a higher operating voltage.
- 6.4 The Company agrees to provide space for Authority to install one (1) RTU cabinet in Company's Vinita Substation.

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 7

Dated: January 1, 2000

7. A point of interconnection at 345 kV shall be in the vicinity of Company's planned Inola Station 345 kV Substation where Authority's 345 kV electric transmission line from Authority's Power Plant 345 kV Substation is connected to Company's 345 kV electric transmission line from Company's planned Catoosa 345 kV Substation. Company agrees to allow Authority the use of Company's available right-of-way coming into Company's Inola Station site for the purpose of constructing and operating Authority's 345 kV transmission line from Authority's Power Plant 345 kV Substation to the interconnection point located in the vicinity of Company's planned Inola Station Substation for as long as Authority uses the right-of-way for this stated purpose.
- 7.1 Authority agrees that it will maintain and operate its 345 kV transmission line from Authority's Power Plant Substation to the point of interconnection near Company's planned Inola Station 345 kV Substation. Company agrees to maintain and operate its 345 kV transmission line from the point of interconnection near Company's planned Inola Station 345 kV Substation to its planned Catoosa 345 kV Substation.
- 7.2 Authority shall pay a facilities charge of \$18,193.75 per month for the use of Company's transmission facilities located between Company's planned Inola Station 345 kV Substation and its planned Catoosa 345 kV Substation. Such facilities to be constructed and installed by Company are those necessary to make Company's existing 345 kV Inola-to-Catoosa transmission line available for use by Authority at 345 kV. Authority will begin paying said monthly facilities

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 7 - continued

Dated: January 1, 2000

charge when the points of interconnection near Company's planned Inola Station 345 kV Substation and planned Catoosa 345 kV Substation are completed and placed into service.

Authority shall continue to pay the monthly facilities charge until such time as (a) Company's planned Inola Unit No. 1 is declared a commercial generating unit, or (b) until such time Company opens and reroutes its segment of 345 kV transmission line located between Company's planned Inola Station 345 kV Substation and planned Catoosa 345 kV Substation into its planned Catoosa 345 kV Substation, or (c) until such time Company or a third party interconnects with the Company's segment of the 345 kV transmission line located between Company's planned Inola Station 345 kV Substation and planned Catoosa 345 kV Substation, whichever event occurs first. Notwithstanding the previous sentence, the monthly facilities charge will terminate effective July 1, 2018.

- 7.3 Company shall have the option to open the point of interconnection and reroute its segment of 345 kV transmission line into its planned Inola Station 345 kV Substation upon providing Authority one (1) year written notice prior to such rerouting. In such event, the point of interconnection shall be at the point where Authority's 345 kV transmission line is connected to Company's planned Inola Station 345 kV Substation. Additional terms, conditions, and cost-sharing provisions will be negotiated at the time of such rerouting.

EXHIBIT A - POINT OF INTERCONNECTION

Point of Interconnection Number 8

Dated: January 1, 2000

8. A point of interconnection at 345 kV shall be in the vicinity of Company's planned Catoosa 345 kV Substation where Company's 345 kV electric transmission line beginning at the point of interconnection with Authority's 345 kV electric transmission line near Company's planned Inola Station 345 kV Substation (Exhibit A, Point of Interconnection Number 7) is connected to Authority's 345 kV electric transmission line beginning at Company's Tulsa North Substation and extending to the point of interconnection.
- 8.1 Authority agrees that it will maintain and operate its 345 kV transmission line from Company's Tulsa North Substation to the point of interconnection. Company agrees to maintain and operate its 345 kV transmission line beginning at a point near its planned Inola Station 345 kV Substation to the point of interconnection.
- 8.2 Company shall have the option to open the point of interconnection and reroute its segment of 345 kV transmission line into its planned Catoosa 345 kV Substation upon providing Authority one (1) year written notice prior to such rerouting. In such event, the point of interconnection shall be at the point where Authority's 345 kV transmission line is connected to Company's planned Catoosa 345 kV Substation. Additional terms, conditions, and cost-sharing provisions will be negotiated at the time of such rerouting.

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 9

Dated: October 1, 1990

9. Two points of interconnection at 345 kV shall be at the Company's Tulsa North Substation. The first point of interconnection shall be that point where the Authority's 345 kV electric transmission line beginning at a point near Company's planned Catoosa 345 kV Substation is connected to the Company's Tulsa North Substation. The second point of interconnection shall be that point where the Authority's 345 kV electric transmission line from its Cleveland Substation is connected to the Company's Tulsa North Substation.
 - 9.1 Authority agrees that it will maintain and operate its 345 kV electric transmission line from Catoosa interconnection to Company's Tulsa North Substation. Company agrees that it will maintain and operate at its Tulsa North Substation all equipment necessary to terminate the Authority's 345 kV transmission line.
 - 9.2 Authority agrees that it will maintain and operate its Cleveland Substation and the 345 kV electric transmission line to Company's Tulsa North Substation. Company agrees that it will maintain and operate at its Tulsa North Substation all equipment necessary to terminate the Authority's 345 kV transmission line.
 - 9.3 The Company agrees to provide space for Authority to install two RTU cabinets in the Company's Tulsa North Substation.

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 10

Dated: October 1, 1990

10. A point of interconnection at 138 kV shall be at a point where the Authority's Wekiwa-to-Silver City 345 kV electric transmission line, initially operated at 138 kV, taps the Company's Riverside-to-Wekiwa 345 kV electric transmission line which is presently operated at 138 kV.
- 10.1 Authority agrees to maintain and operate its Wekiwa-to-Silver City 345 kV electric transmission line at 138 kV until such time that Authority converts its Wekiwa-to-Silver City electric transmission line to 345 kV operation. Company agrees it will operate and maintain at its Wekiwa 345 kV Substation all equipment necessary to terminate the Authority's transmission line so long as it operates at 138 kV during the term of the Agreement.
- 10.2 The Authority agrees to provide written notice to the Company 24 months in advance before making a conversion of their Wekiwa-to-Silver City electric transmission line to 345 kV operation. When Authority converts its Wekiwa-to-Silver City 345 kV electric transmission line to 345 kV operation, a new point of interconnection shall be established in Company's Wekiwa 345 kV Substation. Authority shall pay for the costs of all necessary terminal equipment in Company's Wekiwa 345 kV Substation, required for such new interconnection.
- 10.3 Authority shall have the option to complete the 345 kV transmission loop from its Authority Power Plant 345 kV Substation to Company's Wekiwa 345 kV Substation by construction of a section of 345 kV line between Authority's Cleveland 345 kV Substation and its Silver City 345 kV Substation. Such option may be exercised upon 24 months written notice to Company and subject to Authority providing necessary facilities for reliable interconnection operation as mutually agreed.

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 11

Dated: January 1, 2000

11. A point of interconnection at 69 kV shall be at the point approximately three (3) miles north of Chouteau where Authority's MAID-to-Dawson transmission line crosses Company's 69 kV transmission line Feeder No. 66-141.
- 11.1 Authority agrees that it will maintain and operate its 69 kV transmission line originating in Authority's MAID Substation and extending to the point of interconnection and the 69 kV circuit breaker in Authority's Hunt Substation.
- 11.2 Company may, at its sole option, convert its 69 kV transmission line Feeder No. 66-141 to a higher operating voltage by giving the Authority two (2) years written notice prior to such conversion. In such event the point of interconnection shall be discontinued.

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 12

Deleted: July 2004

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 13

Dated: June 1, 1998

13. A point of interconnection at 69 kV shall be at the Authority's Pryor City #1 Substation.
 - 13.1 Authority agrees that it will maintain and operate at the Authority's Pryor City #1 Substation two (2) 69 kV power circuit breakers and all equipment necessary to terminate the Company's two (2) 69 kV transmission lines until such time as the Company changes the voltage of its transmission lines in accordance with Section 13.2.
 - 13.2 Company may, at its sole option, change the voltage of its transmission lines to the Authority's 69 kV Pryor City #1 Substation by giving the Authority two (2) years written notice of such proposed transmission voltage change.

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 14

Dated: January 1, 2000

- 14. A point of interconnection at 138 kV shall be at Company's Grove Substation.
- 14.1 Authority agrees to pay Company a cash aid in construction, adjusted for income tax purposes, for all costs incurred in providing the equipment, materials, and labor necessary to establish the interconnection and terminate Authority's 138 kV line in Company's Grove Substation.
- 14.2 Company agrees it will maintain and operate at Company's Grove Substation all equipment necessary to terminate the Authority's 138 kV line.

EXHIBIT A - POINTS OF INTERCONNECTION

Point of Interconnection Number 15

Deleted: December 1, 2016

EXHBIT B - LOAD CENTER DELIVERY POINTS

Load Center Delivery Point Number 1

Dated: December 1, 2016

- 1.1 A load center delivery point shall be at the location of Authority's Eastern State Hospital Substation, which shall be a 12.5 kV source for Company to serve the Eastern State Hospital complex including the Forensics Center and Department of Corrections Facility located northeast of the intersection of S 4420 Road and Eastern State Hospital Road in Craig County, Oklahoma ("Eastern State Hospital Facility").
- 1.2 Beginning December 1, 2016, Authority agrees to maintain and operate its 12.5 kV distribution system with 1500 KVA capacity to supply the Company's obligation for providing service to the Eastern State Hospital Facility's electric requirements at this point via Authority's distribution facilities.
- 1.3 Beginning December 1, 2016, Authority agrees to deliver from its electric power resources, by means of its transmission and distribution lines and substation facilities, for the account of Company to Company's customer, Eastern State Hospital Facility, the electric power and energy requirements of such customer(s), not to exceed 1500 kW peak demand at a voltage of 12.5 kV, and Company agrees to compensate Authority therefore by supplying the Authority each month the equivalent kilowatt-hours delivered by Authority to Company's customer.
- 1.4 This load center delivery point shall terminate on the earlier of July 1, 2017 or when Company completes the physical transfer of the entire Eastern State Hospital Facility load from the facilities of the Authority to the facilities of Company.

EXHIBIT B - LOAD CENTER DELIVERY POINTS

Load Center Delivery Point Number 2

Deleted: December 1, 2016

EXHBIT B - LOAD CENTER DELIVERY POINTS

Load Center Delivery Point Number 3

Dated: May 1, 1985

3. A load center delivery point shall be at Company's 69 kV Ramona Substation connection with KAMO's 69 kV transmission line.
- 3.1 The Authority agrees to deliver to the Company, from its electric power resources by means of its transmission lines and facilities, the Company's electrical requirements for its Ramona Substation not to exceed 15,000 kW peak demand, at a nominal voltage of 69 kV. The Company agrees to compensate Authority therefore by supplying the Authority each month the equivalent kilowatt-hours delivered by the Authority to the Company as metered on the low side of the Company's transformer at Ramona Substation, plus an additional 1% adjustment because of low side metering.
- 3.2 The Company recognizes that the Authority's facilities associated with the Ramona delivery point are dedicated for the Authority's power, energy and reactive loading and that the Company's power, energy and reactive loading of the Ramona Delivery Point may in the future cause the Authority's facilities to be inadequate to carry its own system loads and to carry such Company load. The Authority recognizes that the Company needs a certain capacity commitment and therefore Authority agrees to make available 15,000 kW of transmission capacity at the delivery point until March 1, 2014. After March 1, 2012, Authority may at any time give two (2) years written notice to reduce the available capacity to a lower amount as determined by Authority or if at any time the demand exceeds the available capacity amount in effect at such time and such excessive demand causes problems of overloading, low voltage, lowered reliability or other similar problems directly associated with the excessive demand, the Authority may give

EXHBIT B - LOAD CENTER DELIVERY POINTS

Load Center Delivery Point Number 3 - continued

Dated: May 1, 1985

Company one (1) year written notice of the need for system changes or additions and Company agrees to provide or cause to be provided, prior to the end of the notice period, any and all facilities necessary to supply the Company's power, energy and reactive loading which is causing the Authority's system to be inadequate for its own system loads.

- 3.3 The Authority agrees to operate and maintain the 69 kV line from its Collinsville Substation to the Company's Ramona Substation.
- 3.4 This load center delivery point shall terminate on July 1, 2018.

EXHBIT B - LOAD CENTER DELIVERY POINTS

Load Center Delivery Point Number 4

Dated: January 1, 2000

4. A load center delivery point shall be at Company's Sailboat Bridge Substation 69 kV connection with Authority's 69 kV transmission line.
- 4.1 Authority agrees to deliver to Company from its electric power resources by means of its 69 kV transmission system the electric power and energy requirements of Company at Company's Sailboat Bridge 69 kV Substation, and Company agrees to compensate Authority therefore by supplying Authority each month the equivalent kilowatt-hours delivered by Authority to Company.

EXHBIT B - LOAD CENTER DELIVERY POINTS

Load Center Delivery Point Number 5

Dated: October 1, 1990

5. A load center delivery point shall be at Company's Afton Explorer Pump Station 69 kV connection with Authority's 69 kV transmission line.
- 5.1 Authority agrees to deliver to Company from its electric power resources, by means of its 69 kV transmission system, the electric power and energy requirements of Company at Company's Afton Explorer Pump Station Substation and Afton Continental Pipe Substation, and Company agrees to compensate Authority therefore by supplying Authority each month the equivalent kilowatt-hours delivered by Authority to Company.

EXHBIT B - LOAD CENTER DELIVERY POINTS

Load Center Delivery Point Number 6

Deleted: June 1, 1998

EXHBIT B - LOAD CENTER DELIVERY POINTS

Load Center Delivery Point Number 7

Dated: October 1, 1999

7. A load center delivery point shall be at Company's Dawson Substation where the 69 kV bus is connected with Authority's 69 kV transmission lines serving Authority's customer McDonnell-Douglas. The Authority agrees to maintain and operate two (2) 69 kV power circuit breakers at Company's Dawson Substation for connection between the Authority's 69 kV electric lines and the Company's 69 kV bus.
- 7.1 The present metering configuration in Company's Dawson Substation is such that this load center delivery point is within Authority's load control area. Therefore, Authority will directly supply the electric power and energy requirements of McDonnell-Douglas.
- 7.2 If the metering configuration is changed in the future such that this load center delivery point is within Company's load control area, the Company agrees to deliver to the Authority from Company's electric power resources by means of its transmission lines and facilities, the Authority's electric power and energy requirements at Company's Dawson Substation for Authority's customer, McDonnell-Douglas, not to exceed 25,000 kW peak demand, at a nominal voltage of 69 kV. The Authority agrees to compensate Company by supplying to the Company each month the equivalent kilowatt-hours delivered by the Company to the Authority.

EXHBIT B - LOAD CENTER DELIVERY POINTS

Load Center Delivery Point Number 8

Dated: October 1, 1990

8. A load center delivery point shall be at Company's Afton Substation 69 kV connection with Authority's 69 kV transmission line.
- 8.1 Authority agrees to deliver to Company from its electric power resources, by means of its 69 kV transmission system, the electric power and energy requirements of Company at Company's Afton Substation, and Company agrees to compensate Authority therefore by supplying Authority each month the equivalent kilowatt-hours delivered by Authority to Company.

EXHBIT B - LOAD CENTER DELIVERY POINTS

Load Center Delivery Point Number 9

Dated: March 1, 2004

9. A load center delivery point at 13.2 kV serving Authority's customer, Northeastern Oklahoma Electric Cooperative, shall be at Company's Sailboat Bridge Substation.
- 9.1 The Company agrees to deliver to the Authority, from its electric power resources by means of its substation facilities, the Authority's electric requirements at a voltage of 13.2 kV and the Authority agrees to compensate Company therefore by supplying the Company, each month, the equivalent kilowatt-hours delivered by the Company to the Authority.

EXHBIT B - LOAD CENTER DELIVERY POINTS

12. A load center delivery point at 69 kV serving Authority's customer, Northeastern Oklahoma Electric Cooperative, shall be at Northeastern Oklahoma Electric Cooperative's 69 kV Mazie Substation served from a tap on the Company's 69 kV electric transmission line Feeder 66-106 between switches 4819 and 4820 south of Chouteau.
- 12.1 The Company agrees to deliver to the Authority, from its electric power resources by means of its transmission lines and facilities, the Authority's electric requirements at a voltage of 69 kV and the Authority agrees to compensate Company therefore by supplying the Company, each month, the equivalent kilowatt-hours delivered by the Company to the Authority.

EXHBIT B - LOAD CENTER DELIVERY POINTS

Load Center Delivery Point Number 13

Dated: March 1, 2004

13. A load center delivery point at 69 kV serving Authority's customer, Northeastern Oklahoma Electric Cooperative, shall be at Northeastern Oklahoma Electric Cooperative's 69 kV Home Substation served from a tap on the Company's 69 kV electric transmission line Feeder 66-141 between switches 4829 and 4830 south of Pryor.
- 13.1 The Company agrees to deliver to the Authority, from its electric power resources by means of its transmission lines and facilities, the Authority's electric requirements at a voltage of 69 kV and the Authority agrees to compensate Company therefore by supplying the Company, each month, the equivalent kilowatt-hours delivered by the Company to the Authority.

EXHBIT B - LOAD CENTER DELIVERY POINTS

Load Center Delivery Point Number 14

Dated: May 26, 2005

14. A load center delivery point, referred to as Honey Creek, at 13.2 kV serving Authority's customer, Northeastern Oklahoma Electric Cooperative, shall be at Company's distribution line number 859-32 out of Company's Grove substation. The load center delivery point is approximately 2 miles south and 1 mile west of Company's Grove substation.
- 14.1 The Company agrees to deliver to the Authority, from its electric power resources by means of its distribution line and facilities, the Authority's electric requirements at a voltage of 13.2 kV and the Authority agrees to compensate Company therefore by supplying the Company, each month, the equivalent kilowatt-hours delivered by the Company to the Authority.

EXHBIT B - LOAD CENTER DELIVERY POINTS

Load Center Delivery Point Number 15

Dated: December 1, 2016

15. A load center delivery point, referred to as Wal-Mart Distribution Facility, at 69 kV serving Company's customer, Wal-Mart, shall be at Authority's 69 kV delivery station serving Company's distribution substation at the Wal-Mart Distribution Facility near Ramona, OK.
- 15.1 Beginning December 1, 2016, Authority agrees to deliver to Company, from its electric power resources by means of its transmission facilities, Company's electric requirements at a nominal voltage of 69 kV and the Company agrees to compensate Authority therefore by supplying the Authority, each month, the equivalent kilowatt-hours delivered by the Authority to the Company.
- 15.2 This load center delivery point shall terminate on July 1, 2017.

EXHIBIT C - METERING POINTS

Metering points for the interchange, sale, and purchase of electric power and energy shall be as listed hereunder. Additional metering points, as mutually agreed upon in writing by representatives of Authority and Company, shall be included upon their completion.

1. Dawson Substation – 69 kV
2. Pryor City #1 Substation – 69 kV
3. Catoosa Substation – 138 kV
4. Kerr Dam Substation – 115 kV
5. Northeastern Station Substation – 138 kV
6. Ramona Substation – 13.2 kV (until July 1, 2018)
7. Vinita Substation – 69 kV
8. Sailboat Bridge Substation – 13.2 kV
9. Afton Explorer Pump Station Substation – 4.1 kV
10. Tulsa North Substation – 345 kV (Catoosa Line)
11. Tulsa North Substation – 345 kV (Cleveland Line)
12. Silver City Substation – 138 kV
13. Hunt Substation – 69 kV
14. Afton Continental Pipeline Substation – 2.4 kV
15. Afton Substation – 13.2 kV
16. Eastern State Hospital Substation – 13.2 kV (until no later than July 1, 2017)
17. Grove - 138 kV
18. Sailboat Bridge Substation – 13.2 kV
19. Mazie Substation – 69 kV
20. Home Substation – 69 kV
21. Honey Creek – 13.2 kV
22. Wal-Mart Distribution Facility – 13.8 kV (Nov. 1, 2016 to July 1, 2017)

EXHIBIT D - CONTRACTUAL POINTS OF INTERCONNECTION

Dated: January 1, 2000

- 1 (a) A point of interconnection at 161 kV with EDE shall be at Authority's Miami Substation.
- 1 (b) A point of interconnection at 69 kV with EDE shall be at Authority's Afton Substation.
- 1.1 It is recognized by the Parties hereto that the interconnections designated above are with the electric system of EDE, and it is agreed that for all purposes of this Agreement said interconnection of the Authority's facilities with EDE's facilities at said points shall be considered as interconnections with Company's electric system. Nothing construed herein shall affect the rights of Company and EDE of conducting power and energy transactions over these facilities. The Company has arranged for the interconnection of existing electric facilities between EDE and Authority so that they will be maintained and operated as part of said electric interconnections. If at any time that such electric interconnections are discontinued by reason of lack of contract with Company or otherwise, they shall no longer be considered points of electric interconnection provided, however, Authority may arrange to continue such interconnections.
- 1.2 The Authority agrees it will maintain and operate its Pensacola to Miami 161 kV line and associated substation facilities for transmission of power for its load, the Afton interconnection load, and the interconnection with EDE as set out herein.
- 1.3 The Authority agrees to operate and maintain a 161 kV line from its Miami Substation to a point of interconnection with EDE's 161 kV line at the Oklahoma-Kansas State Line.

EXHIBIT D - CONTRACTUAL POINTS OF INTERCONNECTION

Dated: January 1, 2000

2. A point of interconnection at 69 kV with Associated Electric Cooperative, Inc. at Authority's Miami Substation.
- 2.1 It is recognized by the parties hereto that the interconnection designated above is with the electric system of the Associated Electric Cooperative, Inc., and it is agreed that for all purposes of this Agreement said interconnection of the Authority's facilities with Associated Electric Cooperative Inc.'s system at said point shall be considered as an interconnection with Company's electric system. Nothing construed herein shall affect the rights of Company and the Associated Electric Cooperative, Inc. of conducting power and energy transactions over these facilities. If at any time that such electric interconnection is discontinued by reason of lack of contract between Company and Associated Electric Cooperative, Inc. or otherwise, it shall no longer be considered a point of electric interconnection or metering hereunder; provided, however, that Authority may arrange to continue such interconnection.
